Jayasham ND

shamnd0919@gmail.com | 8867197446 | Hassan, Karnataka, India – 573201

Professional Summary

Computer Science undergraduate (CSE, MCE Hassan) with experience building full-stack MERN applications and a good DSA foundation (GPA 9.11). Seeking to apply backend development and problem-solving skills to real-world engineering challenges.

Education

Bachelor of Technology (B.Tech) – Computer Science Engineering, Malnad College of Engineering, Hassan | Ongoing (Year 4 – Semester 7) | GPA: 9.11 (first 6 semesters)t

Higher Secondary (10+2) – PCMB, Brilliant PU College | Completed: 04/2023

Secondary Education, Christa Jyothi School | Completed: 04/2021

Technical Skills

Languages: Python, Java, JavaScript, C, SQL

Web & Backend: React.js, Node.js, Express.js, FastAPI, REST APIs, MERN Stack, HTML5, CSS3

AI & Data: LangGraph, RAG, PyMuPDF, NetworkX, MongoDB, MySQL

Tools: Git, GitHub, Docker, Postman,Render, API Integration, Problem Solving

Projects

ResearchMind AI – Multi-Agent Research Paper Analysis and Literature Review System
Technologies: React.js, FastAPI, Python, LangGraph, PostgreSQL, ChromaDB, PyMuPDF, NetworkX

- Developed an AI-powered research assistant to automate scientific paper discovery, analysis, and literature review generation.
- Designed a LangGraph multi-agent workflow coordinating research planning, paper retrieval, information extraction, synthesis, research gap identification, and report generation.
- Integrated arXiv and Semantic Scholar for paper retrieval, ranking, and duplicate removal; used PyMuPDF to extract methodologies, datasets, evaluation metrics, and limitations.
- Designed citation graph analysis using NetworkX to explore relationships between papers and identify potential research gaps.

Digital Library Management System

Technologies: HTML, CSS, JavaScript, Node.js, Express.js, MongoDB

- Built a MERN-based library platform in a team of 4 using Git workflows (branching, PRs, merge conflict resolution), with book search, category filtering, and real-time availability tracking tested on 100+ book records.
- Implemented typo-tolerant fuzzy search and an admin dashboard for CRUD operations on book records, reducing manual entry.

Carbon Footprint Calculator Website
Technologies: Node.js, Express.js, EJS, JavaScript

- Built a carbon footprint calculator that computes emissions across 3+ categories (travel, energy, diet); fetched live emission-factor data via a public API and cached results to reduce repeat calls.
- Deployed on Render with environment-based config for production vs. local testing.

Research Experience

AI-Augmented Scientific Workflows & Agentic Systems – Self-directed survey on multi-agent research automation (ongoing), synthesizing a PRISMA-format literature review; co- authored Phase-1 report on Agentic AI for Literature Review (RAG, LangGraph, Neo4j).

Certifications & Training

Web Development Certification – Apna College | Data Structures & Algorithms Certification – Apna College |
DevOps Hackathon participant (2024–25)

Additional Information

Languages: English (Fluent), Kannada (Native/Fluent), Hindi (Fluent).
Interests: Backend Development, Software Engineering, Artificial Intelligence;
Actively learning DSA and Full-Stack Development.
